

§ 170.174

- (i) Positive righting arms to at least 35 degrees of heel;
- (ii) No down flooding point to at least 20 degrees; and
- (iii) At least 15 foot-degrees of energy to the smallest of the following angles:
 - (A) Angle of maximum righting arm.
 - (B) Angle of down flooding.
 - (C) 40 degrees.
- (2) For protected routes, there must be—
 - (i) Positive righting arms to at least 25 degrees of heel;
 - (ii) No down flooding point to at least 15 degrees; and
 - (iii) At least 10 foot-degrees of energy to the smallest of the following angles:
 - (A) Angle of maximum righting arm.
 - (B) Angle of down flooding.
 - (C) 40 degrees.

[CGD 79-023, 48 FR 51010, Nov. 4, 1983, as amended by CGD 85-080, 61 FR 944, Jan. 10, 1996; CGD 95-028, 62 FR 51218, Sept. 30, 1997; CGD 85-080, 62 FR 51353, Sept. 30, 1997]

Subpart F—Determination of Lightweight Displacement and Centers of Gravity

§ 170.174 Specific applicability.

This subpart applies to each vessel for which the lightweight displacement and centers of gravity must be determined in order to do the calculations required in this subchapter.

§ 170.175 Stability test: General.

- (a) Except as provided in paragraphs (c) and (d) of this section and in § 170.200, the owner of a vessel must conduct a stability test of the vessel and calculate its vertical and longitudinal centers of gravity and its lightweight displacement.
- (b) An authorized Coast Guard or ABS representative must be present at each stability test conducted under this section.
- (c) The stability test may be dispensed with, or a deadweight survey may be substituted for the stability test, if the Coast Guard or the ABS has a record of, or is provided with, the approved results of a stability test of a sister vessel.
- (d) The stability test of a vessel may be dispensed with if the Coast Guard or the ABS determines that an accurate estimate of the vessel's lightweight

46 CFR Ch. I (10-1-03 Edition)

characteristics can be made and that locating the precise position of the vessel's vertical center of gravity is not necessary to ensure that the vessel has adequate stability in all probable loading conditions.

[CGD 79-023, 48 FR 51010, Nov. 4, 1983, as amended by CGD 95-028, 62 FR 51218, Sept. 30, 1997; USCG-1998-4442, 63 FR 52192, Sept. 30, 1998]

§ 170.180 Plans and information required at the stability test.

The owner of a vessel must provide the following Coast Guard or ABS approved plans and information to the authorized Coast Guard or ABS representative at the time of the stability test:

- (a) Lines.
- (b) Curves of form.
- (c) Capacity plans showing capacities and vertical and longitudinal centers of gravity of stowage spaces and tanks.
- (d) Tank sounding tables.
- (e) Draft mark locations.
- (f) General arrangement plan of decks, holds, and inner bottoms.
- (g) Inboard and outboard profiles.
- (h) The stability test procedure described in § 170.185(g).

[CGD 79-023, 48 FR 51010, Nov. 4, 1983, as amended by CGD 95-028, 62 FR 51218, Sept. 30, 1997]

§ 170.185 Stability test preparations.

The following preparations must be made before conducting a stability test:

- (a) The vessel must be as complete as practicable at the time of the test.
- (b) Each tank vessel must be empty and dry, except that a tank may be partially filled or full if the Coast Guard Marine Safety Center or the ABS determines that empty and dry tanks are impracticable and that the effect of filling or partial filling on the location of the center of gravity and on the displacement can be accurately determined.
- (c) All dunnage, tools, and other items extraneous to the vessel must be removed.
- (d) The water depth at the mooring site must provide ample clearance against grounding.
- (e) Each mooring line must be arranged so that it does not interfere
